

Cooperation agreement between EAN and EFNDT

The European ALARA Network (hereafter called EAN), aims to maintain, enhance and develop competence in radiation protection with special emphasis on the implementation of the ALARA principle for occupational, public and patients exposures represented by Mr. Fernand Vermeersch, Chairperson of the EAN.

The European Federation for Non-Destructive Testing (hereafter called EFNDT), aims to develop powerful Working Groups, the results of which should give answers to NDT problems of industrial and public organisations, and, in particular with regard to the ALARA principle, represents the interests of EFNDT members in the area of radiation protection represented by Mr. Peter Trampus, President of the EFNDT.

The above mentioned parties have noticed that they are following common objectives in terms of improving the radiological protection of workers and the public in the NDT field within the European countries, and they have agreed to establish a partnership in order to:

- exchange information of interest both on their activities and on the situation dealing with optimisation issues with regard to worker and public exposures in Europe,
- cooperate in a European NDT ALARA Network dealing with workers and public exposure management, harmonising radiation protection national requirements and promote good practices in the non-destructive testing sector.

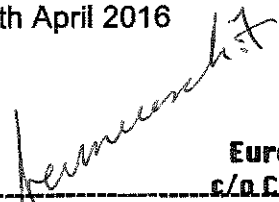

Both parties agree that they shall find resources for reaching their common objectives.

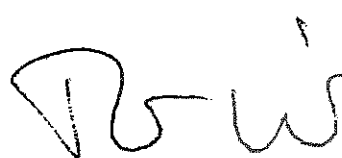

The parties agree that all common results or recommendations from common actions will be free of use for each of the parties.

The parties agree to inform their members about the projects/actions when needed.

The parties agree to envisage setting up any other common action of interest for both, taking care of any opportunity that should occur.
